Simple and affordable airgun for the beginners is made on the basis of a very acknowledged M2 model. Its distinctive features are a free-floating barrel (choked and non-choked), non-regulated air system. Other features are light weight, easy maintenance and high performance characteristics in its class.

**ATAMAN**

Ergonomic stock is designed for right or left grip. Unlike the ambidextrous stocks, this one provides a shooter with maximum comfort by means of well-developed butt handle and thumbhole. Its austere and modern appearance looks best in the laminated type of stock.

# TACTICAL CARBINE

**New product**

**ATAMAN**

This compact version is based on a classic M2 model without any changes in performance characteristics. Foldable stock allows to shorten the length of the gun significantly, thus making it easier to carry and store. Telescopic rear stock can be adjusted for different length.

The stocks are available in walnut and beech with special tactile coating of black, khaki or sandy colors.

Intended for leisure activities, this air pistol is available in two size variants - standard and compact. It is equipped with a removable reservoir and a removable repeater. A convenient cocking sidelever is concealed in the receiver, thus saving from accidental cocking when carrying, taking out or using the pistol. Milled on a shroud is a dovetail rail which allows to use different aiming devices such as collimator or optical sight. The pistol is available in black and silver colors; the grip is made of wood or aluminum with wooden plates thus giving a shooter and the pistol stunning individual looks.

# CARBINE

**ATAMAN**

[www.ataman-guns.com](http://www.ataman-guns.com)

Light and reliable classic hunting rifle. The barrel unit provides an accurate and comfortable shot. The pressure control ensures the shooting accuracy and keeps the velocity out of the pressure vessel. The pressure gauge and charging port are located in the front plug. The trigger is provided with a stroke and pull adjustment, as well as the angle of its location. The Picatinny rail is milled out right on the barrel receiver and tilted for easy mounting of the optical sight.

Bullpup rifle is ultimately worthwhile for various situations, on travel or hunt, where the standard one would be unhandy somehow. The bullpup gunstock allows the reduction of overall size whilst still keeping up with its barrel and pressure vessel. The trigger is moved forward, as well as Picatinny rail for scope setting. All core elements, such as the barrel receiver, clamps and the trigger – are assembled on the main rail.

folded

591x176x115

Designed for entertainment, this rifle has smaller dimensions and weight as compared with other rifles while maintaining the same accuracy. The side-folding stock allows to shorten the rifle length which is very convenient for transportation. Because of the telescopic design of the stock, it can be used with any length of a shooter's arms. Pistol grip is convenient for right- and left-handed shooters.

# SPORT Match

**ATAMAN**

[www.ataman-guns.com](http://www.ataman-guns.com)

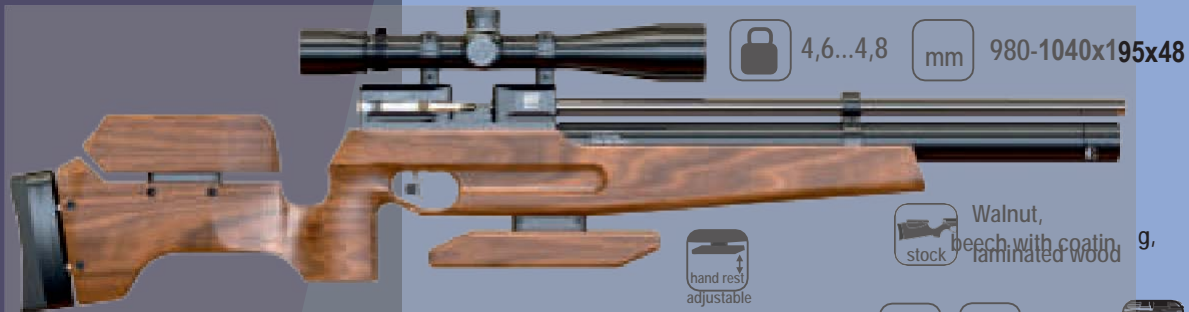

This rifle is for high precision target shooting. The barrel is free-floating. Big loading port and loading bed allow to reload the rifle fast and easy used in a single shot mode. The stock has adjustable grip, piece and cheek butt plate. The fore grip has an integrated rail. The rifle is

equipped with a removable air cylinder.

The premium class rifles if compared with general ones have a lot more adjustments of grip, back plate and cheek piece as well as a possibility to adjust the hand grip for S, M and L sizes. Such stock can satisfy even

the most demanding shooter. Premium-class barrels are made of high-quality stainless steel.

Walnut, laminated wood

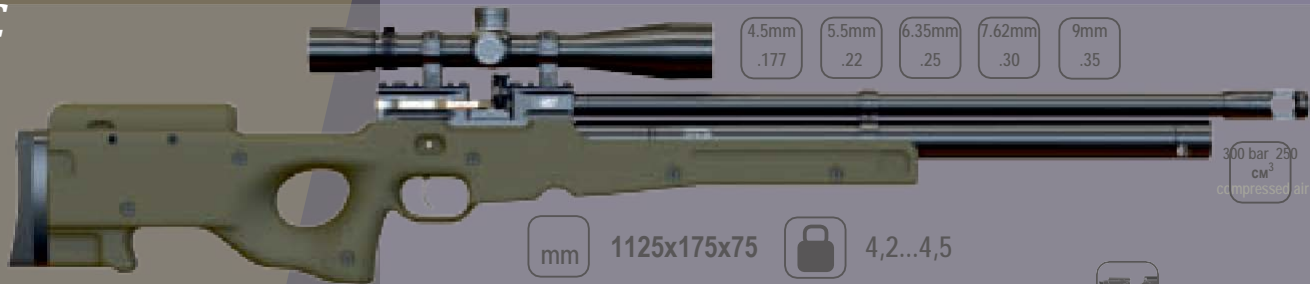

Sporting rifle for high-precision small-sized target outdoor shooting. Pillar-bedding procedure is used when assembling the action into the stock. This gun is available in two classes - Light Varmint and Heavy Varmint and conforms completely to the Benchrest rules. Only the most high-quality barrels are used in these rifles.

**Premium class.** The barrels of Premium class rifles are processed manually. Each rifle is repeatedly tested and is tuned to achieve the maximum possible result in the discipline. Numerous prizes were won by shooters in different countries who used this rifle.

# TACTICAL C

Walnut, beech with coating

Design of this rifle resembles the renowned sniper types. The stock wears a complex body shape with right and left-handed grip, as well as all the necessary adjustments. The gunstock bears extra-heavy Soft Touch coating available in black, olive and sandy colours.

# TACTICAL

Here is one more resemblance of a sniper rifle to follow up with tactical issue. The gunstock features the pistol grip. The extended forestock with adjustable cheek piece and butt plate enable shooting from different firing position. The gunstock bears extra-heavy Soft Touch coating available in black, olive and sandy colours. The exterior surface is dull.
